**CITAB - Centro de Investigação e de Tecnologias Agro-Ambientais e Biológicas**

RELATÓRIO DE ACTIVIDADES  
2008

**UNIVERSIDADE DE TRÁS-OS-MONTES E ALTO DOURO**

**Relatório Científico Submetido na FCT****CITAB****2008****1. Objectives and Achievements**

*This part of the report will allow you to describe the way in which the Unit or the LA is organized and managed, to give the general objectives of the research within the Unit or the LA and finally to give a brief description of the main achievements of the research carried out as a whole during the 2008 period. A maximum number of characters (without spaces) are allowed in each field. If the number of characters exceeds the maximum you will not be able to complete the form and an error message will appear when you try to save your work*

**1.1 Unit Description (3000 ca.)** *Here indicate form of organization and management.*

The Centre for the Research and Technology of Agro-Environment and Biological Sciences (CITAB) is a R&D Unit from the University of Trás-os-Montes e Alto Douro (UTAD). This Unit resulted from a merging process, in 2007, of 3 Units with the policy of bringing together a multidisciplinary team in the areas of agri-food, forestry, environment and particularly the technological engineering with the objective of building the expertise to upgrade the science that has been produced in the agriculture field. This high demanding strategy, requires a close dialogue with the technological engineers but clearly differentiates CITAB from a more conventional attitude.

To cover vertical studies in all the systems the foci for the new centre were divided into four main research Groups: Integrative Biology and Quality, EcoinTEGRITY, Biosystems Engineering and Climate and Atmospheric Modelling. Although this organization, there is a straight link and interaction between the 3 Groups, to promote the cohesion of the Unit, through combined regular meetings between the managers of each Group.

At present the Unit has 156 members, from which 56 are integrated. Pursuing the policy of attracting scientists from other institutions, CITAB has already a Group from the University of Minho and members from the Escola Superior Agrária de Ponte de Lima. Others are expected to join in the near future.

CITAB is managed by a Direction (a Director and 2 Vice-Directors assisted by a secretariat), elected for a period of 4 years, which are responsible for the definition of the objectives and workplans that must be approved by a Scientific Council (SC) which include all the researchers with a Ph.D degree selected by benchmarking criteria; there is also a Executive Committee (with a President and 3 other members from each of the Research Groups) which is responsible for the compliance of the scientific activities agreed in the plenary session of the Scientific Board. Apart from this structure there are a Stakeholder Committee and a Advising Committee. The first one, is a recognition of the importance of the links to the private sector (a strategy pursued in CITAB) in which take part either managing and technical staff of companies and from our society, is envisaged to comment our activities, whilst the second is made of international and independent high qualified scientists which are expected to critical review the scientific results and options, in a international context. Every of these two Committees meets once a year.

**1.2 General Objectives (3000 ca.)** *This refers to the current aims of the Unit or LA as a whole.*

We defined two sets of objectives, scientific and co-scientific, which are explained below.

In our planning for CITAB, we have centered our objectives in the improvement of the quality growth of the Unit, through the incorporation of new members of high scientific quality, in the internationalization of the Research Groups, in the development of innovative research, in the promotion of contacts with industry and in the improvement of the image and visibility of CITAB. These are the collective driving objectives of the Unit in which each of the Research Groups has been asked to act and contribute to.

#### Scientific objectives

Within CITAB was accepted that the research topics would concentrate on the production chain on agri-food and forestry and fit under a more sustainable environment to make the companies more competitive. Thus, our research objectives are concentrated in every step of the chain and their constraints such as improvement of the knowledge and study plant stress adaptation to climate changes particularly the effect and overcoming of extremes, water shortage and quality and improvement of water management (for instance in grapes- Port wine region). Within the same line our objective is to develop studies on wild and agro-forest management and protection against biotic agents, on the control of fires and recovering of ecosystems, and the identification through physical and biological metrics of disturbances in the ecosystem of running waters.

The sustainable production and the organic farming of the vines and other major crops, such as olives and vegetables, their quality and health benefits, were some of the objectives of research within all the existing groups. Taking a novel approach, all these research lines benefit somehow from a close contribution of technology engineering with the objectives to further understand the environmental changes at a scale of the ecosystem and the individual (life organism) using signal and image processing, biosensoring and remote sensing. A more specific contribution from the engineering was in the study and characterization of the forestry resources to be used in the industry and as biofuels and in the exploitation of biomaterials.

At the agri-food and forestry transformation units we envisaged to give an added value to the co-products of these industries to make them to be more sustainable and competitive in the globalization market.

#### Co-scientific activities

Increase the funding and at the same time increase the JCR scientific production, are key objectives. We envisaged a growth in the number of scholarships, and in the number of national and particularly international links (application of the concept of anchor institution), to increase the mobility of researchers and build projects under the FP7. The attraction of the private sector to our research is another main objective.

#### **1.3. Main Achievements during the year of 2008 (3000 ca.)** *Highlights from past research over the reported period.*

During 2008 we consolidated the merging process of the 3 Units, meeting all the objectives that have been set for this process.

At the stage of the FCT evaluation and visit of the international panel (Jan. 2008) we had 42 integrated members and gradually we admitted new members to reach 56 integrated members at the end of 2008, including one Group from U. Minho and members from the Escola Superior Agrária de Ponte de Lima. Thus we grew on critical mass whilst keeping high quality standards for admission of new members.

Regarding cooperation we expanded our links to several SME's particularly in the area of Agri-Food and Environment, which lead to the opportunity of designing joint research projects, pursuing the resolution of problems during the production and transformation chain and in the reduction of the environmental impact of their effluents. Similarly we made contacts at international level to set a long lasting cooperation with our "anchor" research institutions. Each group has achieved this goal establishing at least one link. Moreover, to gain further visibility and

better approach to companies, CITAB has been involved in the successful application to a National Competitiveness Pole on Agri-Food in which around 40 companies are involved. Similarly it is also taking part in a Technological Platform between North Portugal and North of Spain (Galicia) in which around 150 companies are participating.

An improved image and visibility of CITAB was achieved and now an innovative site is available, where each member can input his data thus reducing the costs of updating and passing more responsibility to everyone.

At scientific level we gave specific contributions to the progress of science in the area covered by CITAB, which are addressed ahead under the description of each Research Group. For instance, in the domain of the phytochemicals and health we gain new knowledge on the effect of some compounds in the bacteria of human gut; regarding the environmental studies we can stress the achievements on new bio-indicators and monitoring of waters, on the development of stochastic-dynamic methodology and on forest ecosystems monitoring; also on the domains of precision agriculture and digital image processing; we also developed a new method for the characterization of wood mechanical properties among others; regarding the climate we put forward a parametric model for wine productivity, an extreme important crop for Portugal that had been submitted to climate extremes with detrimental effect on the quality of wine.

Under the co-scientific activities CITAB has increased the number of SCI papers, from 1.4 SCI/cap to 2.0 SCI/cap. Similarly the number of scholarships has increased from 21 to 29.

## 2. Activities

*This part of the report will allow you to describe general activities of the Unit or the LA that are aimed at integrating the research of various groups of which multidisciplinary and/or trans-disciplinary activities are of particular relevance. The second part is aimed to describe work that the Unit or the LA does to extend beyond the scientific environment and to reach the general public, schools or other forms of engaging the public in the work of the Unit or the LA.*

### 2.1. Integrative/multidisciplinary activities during the year of 2008 (3000 ca.) Special activities that aim to carry out research across disciplines.

CITAB was built under the strategy of multidisciplinary. Although some of the activities of the 4 Research Groups were conducted individually most of the activities were the result of an active and permanent collaboration between Research Groups, often resulting in sinergetic teams assembled to cope with specific tasks. Although the research is attributed to a Group, mainly for management purposes, which acts as a leader, members from other Research Groups are requested to participate according to the specific tasks building an interdisciplinarity team.

For instance, the comprehensive studies (i.e., plant stress, water request and irrigation planning, biological pest control) on the influence of climate change and particularly the extremes on the production chains in major crops, such as grapes, chestnuts and olives was a team work between the Climate group and the Integrative Biology and Quality. Similarly for the quality evaluation of the respective crops products and the respective potential health effects.

The development of data processing was also a joint research between the Integrative Biology and Quality and the Biosystems Engineering. The research on the Assessment of stream condition and use of bioindicators to study the effects of environmental impacts at various spatial scales, river rehabilitation and catchment management, involved 3 groups: climate, biosystems engineering and the ecoinTEGRITY.

Another important example of interdisciplinarity is the study of the role of microorganisms in nutrient cycling, leaf breakdown and in ecological succession; their potential use as ecological indicators and in biotechnology and treatment of agro-industrial effluents; these activities involved the Groups of EcoinTEGRITY, Integrative Biology and Quality and Climate and Atmospheric Modelling.

The EcoinTEGRITY and Biosystems Engineering are acting together to develop a new data reduction scheme for wood fracture characterization and the development of an inverse identification procedure of fracture properties of wood.

Under the Wireless Farm concept, the input of the technologies (BE Group) in the agriculture production chain (IB&Q) was also evident in the development of multipowered small stationary data acquisition device as well as a soil-moisture laboratorial prototype sensing device.

Thus, these are only a few examples of research activities involving most of the Research Groups which reveal the added value of CITAB in designing and implementing research in the agriculture production chains.

It must be stressed that most of these activities also imply a rational use and share of equipments to keep costs at the lowest levels.

## **2.2. Outreach activities during the year of 2008 (3000 ca.) Science and Society/general public/schools, etc.**

A large number of researchers from CITAB have been involved, for quite a few years, in the national Project named "Ciéncia Viva". This is seen a close relationship with the high schools, their teachers and students, to promote our research activities and create a long lasting link. Within these projects we bring students to our labs and they see and handle some experiences being more motivated to science activities. Below we give some examples of the projects that have been managed during 2008.

A Floresta e as Ciéncias da Natureza. Ciéncia Viva VI-ID 1457

Aplicação das tecnologias da electrónica e da informaçao no ensino da Física. Ciéncia Viva Concurso PVI – ID1031.

Estação de radioescuta e rastreio de comunicações. Ciéncia Viva VI – ID 1560.

Ocupaçao Científica de Jovens 2008 da AgênciA Nacional para a Cultura Científica e Tecnológica – Ciéncia Viva.

Apart from "Ciéncia Viva", there was an involvement of our researchers in some general conferences more focused on mediatic problematics which attract the attention of our society, such as: i) Bioactive compounds and health in which was discussed the effects of some foods on the potential protective health effect; ii) what option for the biomass production in which was discussed the feasibility of use of biomass as an energy source. Also very important for policy making decisions; iii) the campaign of "Douro Limpo" which addressed issues and produced

leaflets regarding the society behaviour to keep this World Heritage Region much cleaner; iv) several interventions in a joint action with the "Administração da Região Hidrográfica do Norte- ARH-N)" on media regarding the water policy; v) dissemination through basic training courses regarding the SIG and their potential uses in our society.

### 3. Funding

*In this section include funding details during the reporting period. In the item LA FCT include the total sum of the Base+Programmatic funding of the Associate Laboratory.*

Units FCT	0,00	0,00	0,00	0,00	116100	116.100,00
Projects FCT	0,00	0,00	0,00	0,00	1 629 638,00	0,00
Other (National)	0,00	0,00	0,00	0,00	3 416 743,47	0,00
Other (International)	0,00	0,00	0,00	0,00	1 729 444,69	0,00
National Industry	0,00	0,00	0,00	0,00	310 529,97	0,00
International Industry	0,00	0,00	0,00	0,00	0	0,00
	<b>0,00</b>	<b>0,00</b>	<b>0,00</b>	<b>0,00</b>	<b>116.100,00</b>	<b>116.100,00</b>

### 4. General Indicators

#### 4.1 Composition and Training

*In this section indicate the number of researchers hired through the Ciência Programme, during the reporting period. Include also the total number of integrated Researchers with PhD and the PhD or Mater thesis completed in the period.*

	2004	2005	2006	2007	2008	Total
No. of Researchers Hired (Ciência Programme)	0,00	0,00	0,00	0,00	1	1,00
No. of Researchers (FTE) (*)	0,00	0,00	0,00	0,00	42	
Training Masters (Master thesis completed)	0,00	0,00	0,00	0,00	26	26,00
Training PhDs (PhD thesis completed)	0,00	0,00	0,00	0,00	4	4,00

#### 4.2 Researchers Hired

*In this section indicate the individual researchers hired in the period by introducing the public key, their starting date and if applicable their finishing date. In case the researchers also hold a part-time position at another institution (teaching at University or Polytechnic) also indicate this in Other Institution.*

Nome	Start Date	End Date	Other Institution
 Ana Maria Monteiro Paiva Coimbra	01-04-2008	31-03-2013	

#### 4.3 Technical Personnel Hired

*In this section indicate individual technical personal hired. To do so all personal must be registered at the FCT and have a public key.*

#### 4.4 Additional Comments

*In this space you can provide any additional information regarding the section General Indicators*

Within the Ciéncia Programme 2007, the Research Group Ecointegrity benefited from a contract of a Ph.D. researcher, Ana Maria Coimbra, who is studying biomarker histological, molecular biochemical on fishes.

### 5. Research Groups

*In this section of the report you have the names of each Research Group and the Principal Investigators that were indicated in the last report. By following the link in the groups name you will be able to access the individual form of the group.*

*This list includes the currently active Research Groups as well as the Research Groups reported to be active in the previous year.*

Reference	Group Title
RG-AGR-Norte-VilaReal-4033-134	1- <a href="#">Integrative Biology and Quality</a>
RG-AGR-Norte-VilaReal-4033-135	2- <a href="#">Ecointegrity</a>
RG-AGR-Norte-VilaReal-4033-136	3- <a href="#">Biosystems Engineering</a>
RG-AGR-Norte-VilaReal-4033-137	4- <a href="#">Climate and Atmospheric Modelling</a>

#### 1. Group Description -[Integrative Biology and Quality](#)

*Please indicate mains sources of funding for the research of your group. Include all types of funding, like FCT projects, FCT Base, as well as funding from other institutions. You should indicate an approximate amount in EUROS, and the source to which the funds apply.*

- **Research Group Title:** (RG-AGR-Norte-VilaReal-4033-134) - Integrative Biology and Quality
- **Principal Investigator:** Richard Neil Bennett
- **Research Area:** N/D
- **Home Institution:** Universidade de Trás-os-Montes e Alto Douro

##### 1.1. Funding, source, dates (1000 ca.)

FCT BASE: 32 400,00€

Total Funding of Projects running and concluded on 2008:

FCT Projects: 600 822.00€

Funding from Other Institutions: 1 302 186.93 € (International Projects: 571 415.00€ and National Projects: 730 771.93€)

## 1.2. Objectives and Achievements

*This section allows you to provide the objectives and achievements during the reporting period.*

### 1.2.1. Objectives (2000 ca.)

This Group, formed through a rational unification of selected members from 3 research Units, set the following key objectives which, although presented separately, are closely integrated into each sub-area of this Group. Within these objectives is the common, major driving-force of the Unit - to increase associations and collaborations with agro-food companies to improve methods and solve problems relating to whole production chains (from crop and animal production, post-harvest effects, and to the final industrial processing stages with associated waste generation). This focus on agro-food chains and companies is of high relevance at both national and particularly at regional levels.

1. Contribute with research studies to the sustainable agriculture concept of the major socio-economic crops in the northern area of Portugal, such as Brassica vegetables, grapevines, olives, chestnuts, dry fruits, cherries and apples;
2. Develop focused studies on plant stress biology and biochemistry to further identify the biological and biochemical mechanisms of abiotic, biotic and climate-induced stress in the major crops identified above;
3. Plant food quality and health- under this topic it was envisaged the identification and quantification of nutrients and phytochemicals in European and non-European crop plants and to use this data to i) explain the effect of climate change in relation to plant stress and composition; ii) identify eventual influences on the taste of food; iii) identify effects on plant pathogenic bacteria iv. identify effects on intestinal microflora of pigs and humans and ultimately the consequences for animal and human health;
4. Development of comprehensive research and experimental studies on agro-food co-products (waste) to give the companies an added economic value e.g. potential new products

### 1.2.2. Main Achievements (2000 ca.)

The effective integration of activities and resources in the Integrative Biology & Quality Group has lead to an overall increase in effective research with associated achievements in the major objectives defined above.

1. Sustainable Agriculture: there have been major publications from the chestnut and hazelnut research areas (from recently completed and ongoing active projects). Especially successful, in terms of research and publications in per-reviewed journals, is the olive biology group and the international EU hazelnut project (SAFENUT) involving many researchers from IB&Q.
2. Stress Biology: there have been major publications related with physiological and yield effects of elevated CO<sub>2</sub> on grapevine, leaf structure and function of sweet cherry tree cultivars and physiological responses of different olive genotypes to drought conditions. The group is taking the first steps in the main Mediterranean crop responses to mycorrhization to increase water and mineral uptake efficiency.
3. Plant Food Quality and Health: There have been major achievements with associated publications, including i. identification of natural dietary compounds (isothiocyanates and other glucosinolate-derived hydrolysis products) with high antimicrobial activities against antibiotic-resistant human bacteria and against economically-important plant pathogenic bacteria, ii. identification of phytochemicals from Brassica

- species (isothiocyanates) with nematicidal activity against pine wood nematode; iii. extensive compositional data on nutrients and secondary metabolites in raw and processed Portuguese and Global foods.
4. Completion of initial compositional studies (total and specific phenolics; free amino acids; ergosterol and related sterols; carotenoids; tocopherols) in various commercial edible and wild mushrooms and in *Agaricus* mushroom residues as part of an ongoing and evolving collaboration with a major Portuguese mushroom producer.

### 1.3. Group Productivity

This section allows you to provide the productivity during the reporting period.

#### 1.3.1. Publication in peer review Journals (6000 ca.)

### 1.3.3. Master and Ph.D. thesis completed (3000.)

#### **Master thesis completed**

ARAÚJO, C.M.R. (2008). Transporte nas plantas: xilema e floema. Mestrado em Biologia e Geologia para o Ensino. Supervisors: Berta Maria Carvalho Gonçalves e Eunice Luís Vieira Areal Bacelar, defendida na UTAD.

SOARES, M.F.M.D. (2008). Contribuição para o desenvolvimento de um programa de protecção contra o bichado-da-castanha, *Cydia splendana* (Hübner). Mestrado em Mestrado em Agricultura Biológica, Universidade de Trás-os-Montes e Alto Douro, Orientadores: Laura Torres e Albino Bento (ESAB/IPB).

TEIXEIRA, C. (2008). A Célula – Unidade na Constituição dos Seres Vivos. Mestrado em Matemática e Ciências da Natureza, Universidade de Trás-os-Montes e Alto Douro. Supervisors: Jorge Ventura Ferreira Cardoso e Dario Loureiro dos Santos (UTAD).

### 1.3.4. Patents/prototypes (2000.)

### 1.3.5. Organization of conferences (2000.)

Mini-curso em Fisiologia Integrativa: "Stimulus-secretion coupling in single endocrine cells: From Biophysics to Therapeutics". UTAD, Vila Real, 27 e 28 de Maio e 3 de Junho de 2008. Com 30 participantes. Orador: Prof. Stanley Misler (WUSTL, St. Louis, USA). Organization: Amélia M. Silva.

### 1.3.6. Industry contract research (2000.)

To increase the transfer of knowledge between the university and business environment, the research group have projects with companies, like VALCAST II Project established UTAD (co-promoter) and the company Sortegel-Produtos Congelados, Lda (Sortes-Bragança) (promoter) and MicoProject established between UTAD (co-promoter) and the company MICOLPLANT, Lda (promoter) both financed by the program Ideia from Agência de Inovação (Adi).

### 1.3.7. Internationalization (2000.)

*Collaborative publication, Research, Graduate Training Networks or other forms of participation of the Research Group at the international level)*

Among others, IB&Q researchers have active and effective collaborations with:

CEBAS (Spain) – Anchor institute of the IB&Q area: food and nutrition, most recently research on minerals in chestnut fruits.

IFR (UK) – Anchor institute of the IB&Q area: metabolism of polyphenolics and on the bioactives in bergamot fruit peel and *Opuntia* cacti cladodes. A new project is in development on added-value co-products from agro-food wastes.

KNUST (Ghana) – Agronomy, sustainable agriculture and bioactives focused on Ghanaian multi-purpose crops such as *Moringa oleifera* and *Adansonia digitata*.

SGGW (Poland) – Joint research and student exchanges for research on bioactives for human and animal health with the focus on organic crops (as part of the EU QLIF project) and herbal/medicinal teas.

Tech. Uni. Dresden (Germany) - Bioactives in Brassica and related crops focused on clubroot disease, mycorrhizal associations and antifungal phytochemicals.

Uni. Bordeaux (France) - Hydrolysable tannins in chestnuts, other foods and agro-food wastes.  
 Uni. Messina (Italy) - Bioactives in Moringa and agro-food wastes.  
 Uni. Newcastle (UK) - Studies on organic crops as part of the recently completed EU QLIF project with joint publications in preparation.  
 Uni. São Paulo (Brazil) - Phytochemicals and bioactives in bananas and other Brazilian fruits.  
 Uni. Sri Jayewardenepura (Sri Lanka) - Joint research on Brassica and related crops in Sri Lanka, and future development of projects on Sri Lankan food/herb/medicinal plants.  
 WUR (The Netherlands) – Anchor institute of the IB&Q area: focus on Allium and Brassica crops and specifically organo-selenium compounds.  
 The researchers of the group also collaborate with other European research institutions as part of the EU SAFENUT project: UNITO, Italy; CRAB, Italy; CRA, Italy; IRTA, Spain; CITA, Spain; NAGREF - ISPOT, Greece; NAGREF, Greece; INRA, France; Univerza v Ljubljani, Biotehniska Fakulteta, Slovenia.

### 1.3.8. Other publications National (6000.)

### 1.3.9. Government/Organization contract research (2000.)

*Include here work carried out by the group that resulted in a publication or report. Of particular importance are those involved in public policy advice)*

#### 1.4. Future Research

This section allows you to provide the future objectives for the research group.

##### 1.4.1. Objectives (3000 ca.)

For the future the Integrative Biology & Quality Group will be further rationalized into 3 major sub-groups with individual and common foci. This change will occur because of the integration of two new areas - i. Climate and Atmospheric Modelling (originally a separate CITAB Group) and ii. plant biochemistry/plant molecular biology researchers from the University of Minho.

The new sub-groups will be called

1. Identification and Uses of Secondary Metabolites in the Food Chain
2. Climate, Stress and Sustainable Crop Production
3. Biotechnology & Bioproducts

The new sub-groups will pursue the following common objectives at both national and international levels:

1. Development and application of practical agronomic and biotechnological strategies for sustainable food production (animal and plant foods)
2. Identification of effective plant-derived biopesticides and medicinal compounds and studies of their application
3. The development of practical methods for generating value-added co-products from agro-food wastes as part of our sustainable production strategies

There will also be the following specific objectives:

1. Identification and Uses of Secondary Metabolites in the Food Chain will focus on i. Bioactives in foods and residues from plants and mushrooms (providing fundamental data for stress, quality and health effects); Phytochemical biopesticides (identification of effective natural products to control economically important pathogens and pests of foods and in animals and humans); iii. Agro-food wastes and co-products (developing low cost processing methods to generate valuable co-products for the agro-food and health industries).
2. Climate, Stress and Sustainable Crop Production will focus on i. applications of climate and atmospheric modelling (predictive models for agro-forestry systems) to improve sustainable production; ii. Physiological and biochemical responses to stress in model crops (plant biochemistry, productivity and quality composition); iii. Sustainable food production (overlapping and coordinated studies in agronomy, plant biochemistry, stress biology, and plant pathology of chestnuts, olives, grapes and cherries).
3. Biotechnology & Bioproducts will focus on i. Medicinal & aromatic plants (phytochemistry, bioactivities and biotechnology of medicinal and aromatic plants); ii. Plant functional metabolites and plant genetic engineering (role of plant metabolites related to biotic stress and their potential health benefits for humans); iii. Physiology and biochemistry of plant cell cultures (development of in vitro-based bioplatforms); iv. Transport of photoassimilates and plant productivity (phloem transport of photoassimilates in herbaceous plants and trees; mechanisms and regulations of transport into sink tissues); v. Ecology and biological activity on constructed wetlands (low technology systems to treat wastewater - "FitoETARs").

##### 1.4.2. Funding, source, dates (1500 ca.)

Indicate in full including amount of current and pending funding

## 2.1 Group Description – Ecointegrity

Please indicate mains sources of funding for the research of your group. Include all types of funding, like FCT projects, FCT Base, as well as funding from other institutions. You should indicate an approximate amount in EUROS, and the source to which the funds apply.

- **Research Group Title:** (RG-AGR-Norte-VilaReal-4033-135) - Ecointegrity
- **Principal Investigator:** Rui Manuel Vitor Cortes
- **Research Area:** N/D
- **Home Institution:** Universidade de Trás-os-Montes e Alto Douro

### 2.1.1. Funding, source, dates (1000 ca.)

FCT BASE: 32 400,00€

Total Funding of Projects running and concluded on 2008:

FCT Projects: 648 030,00€

Funding from Other Institutions: 2.154.132,93€ (National Industry: 310 529,97€, International Projects: 1.053.529,69 € and National Projects: 790 073,27€)

## 2.2. Objectives and Achievements

This section allows you to provide the objectives and achievements during the reporting period.

### 2.2.1. Objectives (2000 ca.)

The scope of this research group is the agro-ecology centred in the monitoring, protection and restoration of natural resources, at various scales of observation, in aquatic and terrestrial ecosystems . The choice of the adequate ecological indicators is crucial in order to make accurate predictions. In this scope, this sub-project represents a useful contribution to give a consistent basis for the holistic assessment of the ecological status in complex changed natural, semi-natural, and artificial ecosystems. The proposed research intends predict how anthropogenic environmental changes will affect the sustainability, resilience and diversity of disturbed natural ecosystems and agro-systems. Therefore the research area of ecointegrity intends:

1. To set the basis for the holistic assessment of the ecological status in complex natural, semi-natural, and artificialized ecosystems
2. To develop adequate models in order to predict how anthropogenic environmental changes will affect the sustainability, resilience and diversity of disturbed natural ecosystems and agro-forest systems.
3. To look for the selection and validation of the adequate ecological indicators
4. To set efficient techniques for ecosystem rehabilitation.

## 2.2.2. Main Achievements (2000 ca.)

The group has given a contribution to the progress of the scientific knowledge through the following findings: i) The studies on bio-indicators and monitoring of inland waters produced an important number of biological and physical metrics and assessment tools which were able to detect point and non-point effects of disturbance at different spatial scales independently of the geographic variations; besides, it was possible to extend this contribution to a national level with obvious application under the Water Framework Directive. ii) The development of stochastic-dynamic methodology (StDM) as a new sequential modelling process developed in order to predict the ecological status of changed ecosystems. iii) Development of methods and tools for forest ecosystems monitoring, protection, conservation and restoration, which are focused in the control of biotic (pests and diseases) factors. iv) Research on fire ecology allowed a comprehensive characterisation of the vegetation as a fuel at different scales (particle, complex, and stand) in order to test and validate fire behaviour models and simulators. v) Use of biochemical and physiological indicators of stress and ecotoxicological assessment of xenobiotic compounds. vi) Assessment of microbial diversity, physiology and ecology in unspoiled and polluted environments determined their contribution to ecosystem functioning through decomposition. An important knowledge was obtained on the research of microbial degradation of environmental pollutants, either from natural or xenobiotic origins, for potential use to bioremediation technologies.

## 2.3. Group Productivity

*This section allows you to provide the productivity during the reporting period.*

### 2.3.1. Publication in peer review Journals (6000 ca.)

#### 2.3.5. Organization of conferences (2000. )

#### 2.3.6. Industry contract research (2000. )

#### 2.3.7. Internationalization (2000.)

*Collaborative publication, Research, Graduate Training Networks or other forms of participation of the Research Group at the international level)*

There was an intensive cooperation with other institutions, particularly on the Iberian Peninsula, related to the research on fire ecology, due to the common problems with fire hazard. It was the case of Centre Tecnológico Forestal de Catalunya, Centro de Investigaciones Forestales de Lourizán, Centro de Investigaciones sobre Desertificación – CSIC, Universidad Complutense of Madrid, Universidad de Salamanca, Universidad de Sevilha and CERTEC in Universitat Politècnica de Catalunya. It involved the exchange of post-graduate students, visits to laboratories and participation in Eu research programs. Such cooperation in this scientific area was extended to the University of Kastamonu (Turkey), University of Rennes (France), Naples University, the CSIRO Sustainable Ecosystems and University of New South Wales (both in Australia). Different collaborative publications were produced under these contacts. Concerning supervision of post-graduate students and research collaboration in the field of ecological indicators and use of ecological models it was established cooperation with the Agència de Ecología Urbana de Barcelona (Spain) and the University of Fribourg (Swiss).

### 2.3.9. Government/Organization contract research (2000.)

*Include here work carried out by the group that resulted in a publication or report. Of particular importance are those involved in public policy advice)*

## 2.4. Future Research

*This section allows you to provide the future objectives for the research group.*

### 2.4.1. Objectives (3000 ca.)

The main future objective of research of EcoinTEGRITY group is to predict how the changes of anthropogenic origin affect sustainability, resilience and naturality on disturbed ecosystems. So the studies to be undertaken in 2009 designed to develop technological tools that try to understand the dynamics and structure of systems affected by human activity, promoting the planning of programs for measuring and monitoring the environmental conditions where the search form to explain past and present situations and the ability to predict the future of ecological processes. It is more appropriate integration of the areas most relevant played by this line and are the ecotoxicology, environmental chemistry and biotechnology, microbiology, environmental impact studies, ecological modeling and environmental management, among others.

This integration also aims to meet the CITAB's Activities Report, which tries that research is conducted in team work. This will be a priority to be performed. In addition should be extended not only to scientific areas mentioned, but should also took into account the remaining Groups of the Unit and involve socio-economic aspects. The internationalization of research and support from the liaison with business groups and state bodies must be also an important aspect, especially the first point, also raised in the Report. This should be a review of the most appropriate strategy for the members of the Group, is a priority item to be discussed shortly. Another aspect concerns the connection with the designated key institutions, should be promoted effective collaboration that must overcome the current stagnation, in addition to search beyond the current range.

### 2.4.2. Funding, source, dates (1500 ca.)

*Indicate in full including amount of current and pending funding*

## 3.1 Group Description – Biosystems Engineering

*Please indicate mains sources of funding for the research of your group. Include all types of funding, like FCT projects, FCT Base, as well as funding from other institutions. You should indicate an approximate amount in EUROS, and the source to which the funds apply.*

- **Research Group Title:** (RG-AGR-Norte-VilaReal-4033-136) - Biosystems Engineering
- **Principal Investigator:** Pedro José de Melo Teixeira Pinto
- **Research Area:** N/D
- **Home Institution:** Universidade de Trás-os-Montes e Alto Douro

### 3.1.1. Funding, source, dates (1000 ca.)

FCT BASE: 43 200.00 €

Total Funding of Projects running and concluded on 2008:

FCT Projects: 334 299.00€

Funding from Other Institutions: 1 661 378.27 € (International Projects: 47 000.00€ and National Projects: 1 614 378,27€)

### 3.2. Objectives and Achievements

*This section allows you to provide the objectives and achievements during the reporting period.*

#### 3.2.1. Objectives (2000 ca.)

The research activities of this Group, previously concentrated in CETAV, were directed to the development of engineering technologies applied to agri-forestry systems, environment and life towards a more sustainable development and better quality of life. To accomplish the development of these activities 3 main themes were created with specific objectives each:

- 1) Characterization and Exploitation of Biomaterials which purpose is the experimental identification and analytical modelling of mechanical and fracture behaviour of biological materials, in order to improve the value of agroforestry resources; the evaluation of the quality and technological applications of wood; and the characterization and exploitation of agro-forestry biomass as primary energy source.
- 2) Digital Image Processing within agri-forestry, environmental and biological contexts aims to the use of computer vision techniques focused on biological images and precision viticulture, including novel ones using fuzzy logic and to perform movement analysis in animal models, to study functional assessment after spinal cord injury (SCI) and in dogs with hip dysplasia.
- 3) Signal Processing and Biotelemetry. In this area the objectives are related with the development of embedded systems for remote sensing, environmental and physiological parameters monitoring and data processing with the purpose to take management decisions in the crops with less and more economical inputs, including to perform comprehensive studies about remote sensing needs in precision farming of viticulture in order to develop specific sensing devices and to develop high flexible acquisition devices within a wireless sensor network deployed in vineyards.

#### 3.2.2. Main Achievements (2000 ca.)

Concerning the characterization of wood mechanical properties, a new data reduction scheme for mode I wood fracture characterization using the DCB test and the development of an inverse identification procedure of fracture properties of wood through cohesive crack simulations were developed.

Concerning the area of digital image processing the tracking based movement analysis methodology has been improved with the incorporation of novel multi-thresholding and edge detection techniques.

Studies were carried out on the evaluation of functional recovery in animal model using a new treatment protocol where the former analysis model of the animal movement was extended including now a 3D bi-lateral analysis.

In the area of signal and data processing in biological and ecological contexts the Wireless Farm concept is under development, including the development of embedded systems for remote sensing, environmental and physiological parameters monitoring and data processing.

Within the development of specific sensing devices and high flexible acquisition devices, both a multipowered small stationary data acquisition device and a soil-moisture laboratorial prototype sensing device were developed.

### 3.3. Group Productivity

This section allows you to provide the productivity during the reporting period.

#### 3.3.1. Publication in peer review Journals (6000 ca.)

### 3.3.9. Government/Organization contract research (2000.)

*Include here work carried out by the group that resulted in a publication or report. Of particular importance are those involved in public policy advice)*

## 3.4. Future Research

*This section allows you to provide the future objectives for the research group.*

### 3.4.1. Objectives (3000 ca.)

The future objectives are:

To strengthen the main research areas within the research group, developing the undergoing interactions with other research groups and promoting new ones, both in Portugal and internationally, based on an active research agenda, trying to reach a correct balance between fundamental and applied research.

To give a more society-industry relevant bias to the research through the increase in the participation in R&D projects with industry partnerships.

To increase international visibility through the mobility to and from international research partner groups or institutions (namely the ones we designate by anchor institutions), the participation in international relevant scientific conferences and the participation in international R&D projects.

As a result of the above mentioned tasks an increase in the scientific productivity is expected.

#### 3.4.2. Funding, source, dates (1500 ca.)

*Indicate in full including amount of current and pending funding*

---

### 4.1 Group Description – Climate and Atmospheric Modelling

*Please indicate mains sources of funding for the research of your group. Include all types of funding, like FCT projects, FCT Base, as well as funding from other institutions. You should indicate an approximate amount in EUROS, and the source to which the funds apply.*

- **Research Group Title:** (RG-AGR-Norte-VilaReal-4033-137) - Climate and Atmospheric Modelling
- **Principal Investigator:** Maria Solange Mendonça Leite
- **Research Area:** N/D
- **Home Institution:** Universidade de Trás-os-Montes e Alto Douro

#### 4.1.1. Funding, source, dates (1000 ca.)

FCT BASE: 8 100, 00€

Total Funding of Projects running and concluded on 2008:

FCT Projects: 46 487.00€

Funding from Other Institutions: 339 020.00 € (International Projects: 57 500,00€ and National Projects: 281 520.00€)

### 4.2. Objectives and Achievements

*This section allows you to provide the objectives and achievements during the reporting period.*

#### 4.2.1. Objectives (2000 ca.)

The main objective of this group is the assessment of the role of climate processes and their impacts on the environmental subsystems, namely at the following levels:

- Mechanisms of climate variability
- Climate variability and planetary forcing
- Climatic extremes in Europe (droughts, floods and heat waves)
- Climatic description and classification
- Climate variability, air quality and human health impacts
- Air quality and atmospheric pollution
- Air quality impacts on human health
- Atmospheric modeling and agro-florestal impacts
- Forest and agricultural productivity in Europe and Portugal
- European and regional food production
- Crop growth and farming decisions

#### 4.2.2. Main Achievements (2000 ca.)

- The increase of extreme events during the last decades and the sharply increase in the future
- Evidence for a strong relationship between the increase in agriculture and forest losses and the frequency of occurrence of climate extremes
- A parametric model was developed and applied for modeling wine productivity using temperature and precipitation parameters in the Douro Region
- A forest fire forecasting model and the modulation of lightning activity

#### 4.3. Group Productivity

This section allows you to provide the productivity during the reporting period.

##### 4.3.1. Publication in peer review Journals (6000 ca.)

###### ISI Proceedings:

PEREIRA, S. C. (2008). As Ciências da Atmosféricas e o Meio Ambiente nas Escolas: Implementação de um Projecto. Mestrado em Meteorologia e Oceanografia Física, Universidade de Aveiro. Supervisor: Prof. João Corte-Real e Dr. Sérgio Ferreira.

#### 4.3.4. Patents/prototypes (2000. )

#### 4.3.5. Organization of conferences (2000. )

#### 4.3.6. Industry contract research (2000. )

#### 4.3.7. Internationalization (2000.)

##### *Collaborative publication, Research, Graduate Training Networks or other forms of participation of the Research Group at the international level)*

At the international level, we have been developing strong research collaboration with the Free University of Berlin and the University of Cologne, which reinforces our connection with these two anchor-institutions of the CliMA Group. This collaboration was initialized under a CRUP-DAAD project, untitled "Connections between Precipitation Extremes in Southern Europe and Large-Scale Climate Variability". As a result, we are preparing two papers for submission to peer review journals, as well as several communications to International Conferences with ISI Proceedings. One of the members of the Portuguese team stayed for one week in Berlin in 2008, where he was invited to present a seminar about Multivariate Statistical Analysis in Climatology. During the same year, a member of the German team stayed at UTAD for one week. In view of this strong collaboration we achieved an improvement of scientific knowledge of the large-scale atmospheric mechanisms that affect the precipitation regimes throughout SW Europe, which is essential to assess the impacts of observed precipitation extremes, e.g., on agriculture, forestry, water management, hydroelectric power generation and tourism. The establishment of a more comprehensive scientific basis both for present day and future climate is of utmost relevance for a better planning and management of the natural resources throughout the Mediterranean Basin

For a long time, we have been developing a strong collaboration with the Atmospheric Physics group at the University of Salamanca. During 2008, we have participated in Spanish Research Projects of outmost importance, dealing mainly with spatial and temporal distribution of atmospheric lightning in Iberia, impact of climate change in agriculture in the Duero Basin and the impact on human health.

During 2008 we continued the development of fruitfull collaboration with the Academy of Sciences of the Czech Republic, throughout the FCT funded project "Reconstruction of the past climate in Portugal from borehole temperatures". Within this project, temperature-depth profiles are used to infer climate change over the past two centuries and to document how effectively the solid earth records secular changes in surface air temperature.
